

## TREASoURcE-project

The TREASoURcE project, funded by the Horizon Europe programme (2022–2026), aims to enhance circular economy solutions through regional pilots. The project focuses on three value chains: unused plastic waste, reuse of batteries from electric vehicles, and biobased side and waste streams, especially from agriculture and forestry.

The consortium consists of 17 partners from seven European countries and it is coordinated by VTT. MTK is in the project in particular to boost circular economy in the sectors of agriculture and forestry.

## KiertoaSuomesta.fi

Marketplace for  
biobased side streams

## KiertoaSuomesta.fi -marketplace

KiertoaSuomesta.fi is a digital marketplace that connects sellers and buyers of materials. The site mainly serves as a marketplace for bio-based side streams and helps sellers and buyers to find each other.

The main target groups are companies producing biobased side streams from agriculture, forestry and food processing, as well as industries using raw materials and the public sector. In addition, the site can be utilized in listing contracting services and in feed trade.

The aim of KiertoaSuomesta.fi is to create new business opportunities for farms in a convenient manner. Businesses can gain additional revenue by utilizing side streams. Even small amounts can be valuable resources for another.

## Examples of side streams

- manure, sludge
- contaminated feed
- grass
- straw
- berry seeds and skins
- logging residues
- bark
- wetland vegetation

## Circular bioeconomy is promoted through the marketplace

KiertoaSuomesta.fi site will help to develop regional nutrient and material cycles to promote circular economy. Simultaneously waste and emissions are reduced, natural resources are kept in use for longer and materials gain added-value.
